

Breastlight helps detect breast abnormalities early

Varying statistics state that one in 29, one in 26, or one in nine women who reside in urban areas will be diagnosed with breast cancer in their lifetime. Irrespective of what the actual statistic is, it is clear that women are at high risk of being diagnosed with breast cancer.

Diagnosing breast cancer at an early stage, before it has had the opportunity to spread outside of the breast tissue, is key to achieving a greater than 99% five-year survival rate.

Breastlight is a simple, safe, cost-effective and easy-to-use handheld device that can be used in the workplace to assist in the early detection of breast abnormalities, which may or may not be cancerous. It is not a diagnostic device and neither is it a replacement for annual or two-yearly mammograms. It is simply a device to be used in the periods between one mammogram and the next. By affording you an inner view of the breast, it assists in the early detection of breast abnormalities.

Currently, women should be performing a monthly 'self-feel breast examination' during the periods between mammograms. This 'feel' examination is not always successful in detecting an abnormality due to variations in the breast tissue density, the size of the breast, or the size of the abnormality etc. The Breastlight device enhances the 'self-feel examination' by giving you an internal

view of the breast and 'showing' possible areas of concern. Shadowy or dark spots that are detected should be followed up by visiting a medical professional for diagnosis. Breastlight detects abnormalities as small as 7 mm.

Manufactured in the UK, Breastlight is successfully retailed in 67 countries and Medloyd Healthcare is the official importer and distributor for South Africa. Contact our offices to arrange a Breastlight 'screening' day for your women employees, or alternatively, enquire about purchasing a device for in-house use by your occupational health department. Full training is provided.

View a demonstration video, clinical trials, etc. by visiting our dedicated Breastlight website www.breastlightsouthafrica.co.za or www.medloyd.co.za and follow the link.

How does Gloves In A Bottle work?

In a nutshell, Gloves In A Bottle is an all-in-one shielding and dry skin care lotion that 'keeps the good stuff in and the bad stuff out'.

The technology associated with Gloves In A Bottle (GIAB) is totally opposite to that of an artificial, conventional moisturiser. When applied, GIAB attaches to the very outermost surface of the skin and creates a microscopic, web-like protective barrier. This barrier is totally undetectable and achieves the two key fundamentals relative to maintaining a healthy, vital skin in the workplace. It:

1. Locks out moisture-depleting irritants from penetrating the skin and removing the natural moisture, lipids and oil of the skin. These irritants include chemicals, solvents, resins, cement, petrochemical-related products, dirt, grease, grime, paint and alcohol-based scrub solutions etc.
2. Locks in the skin's natural moisture and oils, allowing for deep-rooted and long-lasting nourishment through all seven major layers of the skin – from the inside out. The human body is naturally designed to function in this way

It makes perfect sense that if we are able to prevent the loss of the skin's natural moisture, lipids and oils, whilst simultaneously

locking these in, the ideal platform is created for maintaining a healthy skin. Homeostasis is achieved. Our bodies consistently strive to achieve this in order to function optimally.

Artificial, conventional moisturisers offer no protective barrier, and any benefit that might be achieved when using this type of product is lost when washing the hands or body. Gloves In A Bottle does not wash off and a single application will last 4-12 hours and will endure multiple washes, even when using solvents or soaps. Gloves In A Bottle does not block the skin pores and continues to allow the skin to breathe and perspire naturally.

Using Gloves In A Bottle in your organisation is extremely cost-effective (+/- 25 cents an application) and minimises down time for those employees who experience severe adverse, work-related skin conditions.

It is available in 60 ml, 240 ml, or one gallon (3.78 L) pump bottles, wall dispensers with 800 ml sachets, and 50 gallon drums for larger corporates that wish to self-decant.

Contact Medloyd Healthcare on +27 (0)11 397 2717 to arrange a FREE TRIAL and take the first step towards giving your employees the protection and dry skin care they deserve.
